Indication (cont’d)
SHINGRIX is not indicated for prevention of primary varicella infection (chickenpox).
Tell them why they’re at risk

Important Safety Information
- SHINGRIX is contraindicated in anyone with a history of a severe allergic reaction (e.g., anaphylaxis) to any component of the vaccine or after a previous dose of SHINGRIX.

Important Safety Information (cont’d)
- Review immunization history for possible vaccine sensitivity and previous vaccination-related adverse reactions. Appropriate medical treatment and supervision must be available to manage possible anaphylactic reactions following administration of SHINGRIX.

Please see additional Important Safety Information for SHINGRIX throughout and full Prescribing Information at SHINGRIXHCP.com.

“...it can reactivate anytime. And your risk increases as your immune system naturally declines with age. 1 out of 3 people gets it during their lifetime.”

If you’ve had chickenpox, the virus that causes shingles is already in your body, regardless of how healthy you are...
SHINGRIX is not indicated for the prevention of PHN and other complications.

Many people may associate shingles with the telltale painful rash. But there could be possible complications, making it much more serious.¹,²

What have you heard about shingles?

Not only is shingles a blistering rash that can be painful, but it can also cause postherpetic neuralgia (PHN), nerve pain that can last for months. And if you get shingles near your eyes, it can cause vision complications.¹,²,¹¹,¹²

Important Safety Information (cont’d)
• In a postmarketing observational study, an increased risk of Guillain–Barré syndrome was observed during the 42 days following vaccination with SHINGRIX

Please see additional Important Safety Information for SHINGRIX throughout and full Prescribing Information at SHINGRIXHCP.com.

Did you know...
PHN affected 13% of adults with shingles between 60 and 79 years of age and 20% of adults with shingles ≥80 years of age in a population-based study.¹

The benefit of SHINGRIX in the prevention of PHN can be attributed to the effect of the vaccine on the prevention of herpes zoster. The efficacy of SHINGRIX in the prevention of PHN in subjects with confirmed herpes zoster could not be demonstrated.¹²

Visual complications can occur. Herpes zoster ophthalmicus, which affects between 10% and 25% of adults with shingles, can lead to ophthalmic complications, including, in rare cases, vision loss.¹

SHINGRIX is not indicated for the prevention of PHN and other complications.
**ADDRESSING PATIENT CONCERNS**

In some cases, patients will still feel unsure about getting vaccinated. Here are some possible scenarios and how you can respond.

"I don't have time to get vaccinated today."

"You can get immunized here right now, or if you're busy, we can schedule a time that's more convenient for you."

"But I need to talk to my doctor first."

"SHINGRIX is recommended for patients 50 years and older. I can reach out to your doctor right now and talk to them."

"I can't be at risk. I'm healthy."

"No matter how healthy you feel or how good you are with diet and exercise, you're still at risk because your immune system declines as you age."

"I don't have time to get vaccinated today."

"Most plans cover SHINGRIX. I can check for you right now."

---

**Important Safety Information (cont'd)**

- Solicited local adverse reactions reported in individuals aged 50 years and older were pain (78%), redness (38%), and swelling (26%).

Please see additional Important Safety Information for SHINGRIX throughout and full Prescribing Information at SHINGRIXHCP.com.

**Important Safety Information (cont'd)**

- Solicited general adverse reactions reported in individuals aged 50 years and older were myalgia (45%), fatigue (45%), headache (38%), shivering (27%), fever (21%), and gastrointestinal symptoms (17%).
ADVERSE EVENTS

YOUR PATIENTS WILL WANT TO KNOW
WHAT KIND OF SIDE EFFECTS THEY
SHOULD EXPECT WITH SHINGRIX.

“Side effects can include pain, redness,
and swelling at the injection site.
You may also experience muscle pain,
fatigue, headache, shivering, fever,
or upset stomach.”12

“The majority of solicited local adverse reactions
and general adverse events seen with SHINGRIX
had a median duration of 2 to 3 days.”12,17,18

Important Safety Information (cont’d)
• The data are insufficient to establish if there is vaccine-associated risk with SHINGRIX in pregnant women
• It is not known whether SHINGRIX is excreted in human milk. Data are not available to assess the effects of SHINGRIX on the breastfed infant or on milk production/excretion

Please see additional Important Safety Information for SHINGRIX throughout and full Prescribing Information at SHINGRIXHCP.com.

Important Safety Information (cont’d)
• Vaccination with SHINGRIX may not result in protection of all vaccine recipients

SHINGRIX
(ZOSTER VACCINE
RECOMBINANT, ADJUVANTED)
Once you’ve gotten the conversation started, continue to stress the importance of shingles vaccination when talking with your appropriate patients. And remind them that only SHINGRIX delivered >90% efficacy against shingles, regardless of age, in patients 50 years and older.12,*
